

Syed Mustafa Ali

Software Engineer

+92 313 8554422 | syyedmustafa3@gmail.com | [LinkedIn](#) | Islamabad, Pakistan

SUMMARY

A fresh Computer Science graduate with hands-on experience in frontend development, passionate about building clean, efficient, and user-friendly applications. Eager to bring strong problem-solving skills to a team where I can learn fast and contribute from day one.

EDUCATION

Bachelor of Science in Software Engineering

Capital University of Science and Technology | Islamabad

Sep 2022 - Jul 2026

Islamabad, Pakistan

SKILLS

Programming languages: HTML/CSS, Javascript, React, Python, C++

Framework and tools: Visual Studio, Tailwind CSS, Vite

Databases: MySQL

DevOps & Testing: Github, Object Oriented Programming (OOP), A/B testing

Soft Skills: Team player, Adaptable, Quick Learner, Effective Communicator

EXPERIENCE

E-Shifa

Intern (Frontend - React.js)

Onsite, Islamabad

Aug 2025 - Sep 2026

- Completed a frontend-focused internship where I reinforced Object-Oriented Programming (OOP) fundamentals through technical assignments in React and JavaScript.
- Constructed several standalone projects, including a movie-browsing application and a web-based game, to master frontend design patterns.
- Utilized advanced JavaScript classes and inheritance to achieve modular component logic and data encapsulation.
- Enhanced proficiency in state management and component-based architecture through iterative, task-driven development.
- Demonstrated strong problem-solving capabilities by independently delivering diverse mini-projects throughout the internship tenure.

PROJECTS

Agentic RAG System | [Github](#)

- Developed the React frontend for the application, delivering a responsive interface layered on top of the agentic backend.
- Built a semantic document grading layer to evaluate retrieved chunks for relevance, automatically triggering a web-search fallback when documents were insufficient.
- Designed and built an intelligent, multi-tier Agentic RAG system using LangGraph, GPT-4o, FAISS, Tavily Web Search, and Streamlit.

Multi-Document Research AI Assistant

- Engineered a comprehensive RAG-based assistant facilitating conversational queries over PDF sets with integrated source citations.
- Designed a React/Vite frontend with drag-and-drop PDF upload and inline source citation display for retrieved answers.
- Implemented end-to-end semantic search and reranking pipeline, improving answer relevance and reducing hallucination via citation grounding.

Art Gallery Information System (Academic Case Study)

- Designed a system architecture for managing gallery artwork, artist profiles, and exhibitions.
- Created ER diagrams, use case diagrams, and functional/non-functional requirements documentation.
- Addressed risks in requirements management and ensured alignment with user needs.

Mental Health Chatbot (Collaborative Project)

- Tested a chatbot focused on providing mental health support through user-centered design.
- Conducted usability testing to improve conversation flow and user satisfaction.
- Applied basic sentiment analysis techniques.
